PRODUCT REQUIREMENTS DOCUMENT / 2026

Personal Brand & Direct Selling Opportunity Website

A complete product, design, technical and implementation specification for a trust-first personal business website and lead-generation platform.

PROJECT TYPE	Premium personal branding + business opportunity + trust & verification + lead generation
PLATFORM	Responsive website — mobile, tablet and desktop
PRIMARY MARKET	India
IMPLEMENTATION	Google Antigravity
ARCHITECTURE	React + Vite + TypeScript frontend; Laravel + MySQL backend (recommended)
CONTENT MODEL	Owner-managed; all company-specific information entered by the website owner

Core product principle
Build a real, maintainable application—not a static landing-page mockup. The owner must be able to manage website content, media, documents, earning examples, FAQs, events and enquiries through a secure admin dashboard without editing source code.

Prepared from the supplied website reference screenshots and the requested product concept.

Document Guide

- 1. Project overview and objectives
- 2. Design direction and visual identity
- 3. Website information architecture
- 4. Detailed homepage requirements
- 5. Additional premium sections
- 6. Admin dashboard and content management
- 7. Lead generation and enquiry management
- 8. Technical architecture and database
- 9. Functional requirements
- 10. Security requirements
- 11. SEO and performance
- 12. Animation and micro-interactions
- 13. Legal, trust and content compliance
- 14. Development phases
- 15. Acceptance criteria
- 16. Future enhancements
- 17. Final Antigravity implementation instructions

This PRD is intended to be supplied to Google Antigravity as the primary implementation specification. The owner will provide the actual company name, official documents, profile details, team information, testimonials, earning evidence and contact details.

1. Project Overview

1.1 Project vision

Build a premium, modern, trustworthy and conversion-focused personal website for a direct selling team leader. The website acts as the leader’s official digital presence, introducing visitors to the leader, the company, the business model, learning opportunities, team culture, training system, authentic member experiences and documented earning examples.

The primary objective is to convert interested visitors into qualified WhatsApp conversations and potential team members. The website must not resemble a generic MLM landing page or an outdated affiliate-marketing template. It should feel like a premium startup website with excellent typography, modern layouts, authentic content, transparent business information and polished interactions.

1.2 Core objectives

1. Establish personal credibility and professional identity.
2. Explain the company and its business model transparently.
3. Display company registration and supporting documentation.
4. Showcase genuine team-member experiences and testimonials.
5. Present authentic earning examples with appropriate context.
6. Introduce training, mentorship and team support.

7. Explain the joining process step by step.

8. Answer visitor questions through an interactive FAQ.

9. Generate qualified leads through WhatsApp and enquiry forms.

10. Provide a complete CMS-style admin dashboard to manage all website content without editing source code.

1.3 Primary target audience

• College students exploring practical learning opportunities.

• Working professionals interested in additional work.

• Housewives interested in flexible work opportunities.

• Beginners interested in digital skills and entrepreneurship.

• People exploring direct selling and associated business models.

• Visitors who want to understand a company before deciding whether to participate.

1.4 Business principle

The website is an informational and lead-generation platform. It must not suggest guaranteed earnings, guaranteed employment, assured financial returns or guaranteed business success. Income-related information must be based on genuine, verifiable records and accompanied by appropriate disclosures. The actual company’s products or services, business model, compensation structure and joining conditions must be accurately explained.

2. Design Direction & Visual Identity

2.1 Design inspiration

Use the supplied screenshots as the primary structural and visual inspiration. Recreate their major content sections while improving presentation and usability. Do not copy the reference website pixel-for-pixel; create an original visual identity inspired by its content hierarchy.

• Modern editorial typography and generous whitespace.

• Premium startup-style layouts and Bento-style information cards.

• Soft glassmorphism only where appropriate.

• Elegant gradients, subtle shadows and layered depth.

• Rounded cards and containers.

• Smooth scrolling and refined micro-interactions.

• Clean, mobile-first navigation and accessible controls.

2.2 Initial color system

Purpose	Color
Primary dark	#10100D
Primary lime	#DDF77B
Secondary lime	#CFF46B
Accent purple	#6747C7
Accent pink	#EE83CB
Accent cyan	#38C9E8
Main background	#FAF9F6
Card background	#FFFFFF
Main text	#171717
Secondary text	#696969
Borders	#EAE8E2

Avoid using every accent color simultaneously. Maintain a consistent visual hierarchy. Colors must be centralized as design tokens and editable through website settings where practical.

2.3 Typography

- Headings: Playfair Display or DM Serif Display.
- Body: Inter or Manrope.
- Buttons: Manrope SemiBold.
- Numbers and statistics: Inter Bold.

Use editorial serif headings for important sections and clean sans-serif typography for supporting content.

2.4 Responsive layout

Breakpoint context	Requirements
Mobile	Single-column content; touch-friendly controls; horizontal swipe carousels; compact navigation; sticky WhatsApp CTA; correctly sized videos and images.
Tablet	Two-column layouts where appropriate; responsive card grids; comfortable spacing.
Desktop	Premium multi-column layouts; wider content containers; expanded navigation; spacious hero sections; multi-column galleries and Bento grids.

Never simply scale down the desktop layout. Design mobile-first and test real interactions at each viewport size.

3. Website Information Architecture

3.1 Main website pages

1. Home
2. About Me
3. About the Company

4. Business Opportunity
5. How It Works
6. Team & Member Experiences
7. Team Earning Proofs
8. Company Proof & Verification
9. Live Training & Meetings
10. Video Testimonials
11. How to Join
12. Frequently Asked Questions
13. Contact

3.2 Legal and supporting pages

- Privacy Policy
- Terms & Conditions
- Earnings Disclaimer
- Disclaimer & Business Disclosure
- Grievance / Contact Information, where applicable

The primary experience should be a polished long-form landing page with anchor navigation. Supporting pages should have their own URLs for SEO, sharing and accessibility.

4. Detailed Homepage Requirements

4.1 Header & navigation

- Left side: personal brand logo or monogram, team/brand name and optional designation.
- Navigation: Home, About, Opportunity, Team Results, Company Proof, FAQs and Contact.
- Primary CTA: Chat on WhatsApp.
- Interactions: sticky header on scroll, smooth anchor navigation, mobile hamburger menu, active-section highlighting and subtle background blur.
- WhatsApp button opens a configurable conversation link. Logo, brand name and navigation items are manageable in admin.

4.2 Hero / introduction

- Create a premium introduction card with profile photo/logo, leader name, designation and WhatsApp CTA.
- Example heading: “Start Your Learning & Business Journey With [Team Name]”.
- Example supporting copy: “I help students, working professionals and individuals explore structured learning opportunities with practical guidance, training and team support.” All copy is replaceable.
- Primary CTA: “Message Me on WhatsApp”. Secondary CTA: “Explore Team Results”.
- Visual: high-quality portrait, professional background, soft purple or lime gradient, premium framed image and optional role badge.
- Below hero, provide four editable feature cards: Active Team Members, Beginner Friendly, Flexible Timing and Team Support. Claims must reflect actual support and conditions.

4.3 About me

- Display profile image, full name, short professional introduction, background, experience, why the leader started, what the leader helps people understand, personal mission and social links.
- Use an editorial two-column layout: portrait on the left; text, highlights and CTA on the right.
- Optional statistics: years of experience, active team members, training sessions conducted and number of testimonials. Show only genuine data.

4.4 About the company

- Editable fields: official company name, brand name, company logo, official website, registered office address, incorporation/registration information, CIN or relevant registration number, GSTIN if applicable, official contact information, business category, products/services, company background, mission and vision, and business operating model.
- Include a “Why I Work With This Company” area where the leader can explain personal reasons and experience.
- Clearly distinguish the legal company, products/services, independent team/community and individual team leader.
- Do not imply that a personal team website is the official corporate website. Publish claims only when supported by authentic documents or official sources.

4.5 Business opportunity / what we do

- Explain the actual opportunity: nature of work, products/services involved, available activities, required skills, training, participation requirements, costs/fees/purchases if applicable, compensation model, payment process and important conditions.
- Use three or four cards such as Learn, Implement, Get Support and Track Your Progress.
- All cards are editable. Do not publish generic claims that misrepresent the company’s actual model.

4.6 How it works

- Explain the workflow with configurable steps: Understand the Opportunity; Learn About the Company; Complete Eligible Registration if applicable; Access Training and Resources; Perform Approved Business Activities; Track Performance and Eligible Earnings.
- Use numbered circular indicators, connected vertical timeline on mobile and horizontal timeline on desktop.
- Admin can add, edit, remove and reorder steps.

4.7 Team & member experiences

- Heading: “Real People. Real Experiences.” Supporting copy invites visitors to explore experiences shared by actual participants.
- Display one large featured testimonial video with thumbnail, play/pause controls, duration, member name, optional designation/city and caption.
- Show secondary video cards below. Mobile: horizontal swipe carousel with partial next-card visibility. Desktop: three/four-column gallery or carousel.
- Admin can upload videos or add YouTube/Vimeo links, thumbnails, member names, captions, featured status, order and visibility.
- Testimonials must be genuine and published with relevant member permission.

4.8 Team earning proofs

- Heading: “Team Earning Proofs”. Supporting copy: “Explore documented earning examples shared by participating team members.”

- Build an interactive carousel with original evidence image, member name, amount, earning period, date, optional description and proof category.
- Carousel: prominent center card, partially visible adjacent cards, previous/next controls, mobile swipe, pagination and smooth transitions. Optional autoplay must pause on hover and provide accessible controls.
- Optional filters: All Results, Daily Examples, Weekly Examples and Monthly Examples.
- Disclosure: “Earnings shown are individual examples and do not represent guaranteed or typical results. Actual income varies based on individual activity, skills, eligibility, business performance and other applicable factors. These examples should not be interpreted as a promise of future income.”
- Admin workflow: Draft, Pending Review, Approved for Publication, Rejected and Archived. Only approved records appear publicly.
- Keep original evidence privately where possible. Public versions must be redacted to protect bank account numbers, transaction IDs, phone numbers and other private information.

4.9 Company proof & verification

- Heading: “Company Proof & Transparency”. Explain that visitors can explore documents and official information.
- Document cards may include company registration, Udyam registration if applicable, GST registration if applicable, official website, product/service information and other relevant supporting documents.
- Document viewer: modal or detail page, preview, zoom, open original and download only if approved for public access.
- Provide links to relevant official government/company verification portals where applicable.
- External research or AI-generated summaries must be labelled as research context, not official government verification. Show source and date.
- Never use “Government Verified”, “ChatGPT Verified” or “Google Verified” without actual authoritative verification.
- Admin fields: title, description, issue date, source, expiry date, public/private status, approval status and external links.

4.10 Live training & team meetings

- Heading: “Live Training & Team Meetings”. Display training screenshots, meeting photographs, short clips, webinar screenshots, learning activities and team events.
- Use an editorial asymmetric image grid with varied image sizes. Cards may include play buttons, date, topic, category and description.
- Admin can upload images/videos or external links, add event details, feature media, reorder and publish/unpublish.

4.11 How to join

- Heading: “How to Get Started”. Use a five-step process: Message Me on WhatsApp; Understand the Opportunity; Review the Official Registration Process; Begin Training; Start Participating.
- Explain the company, working model, requirements, costs and earning structure before registration.
- Use numbered steps, white cards and a vertical timeline on mobile.
- The actual steps must be configurable to match official company processes. CTA: “Discuss the Joining Process”.
- Do not collect payment or registration through this website unless a separate, legally approved transaction workflow is intentionally implemented.

4.12 FAQ / frequently asked questions

- Create categorized interactive accordions with search and category filtering.
- About the Work: legality, genuine opportunity, company activity, products/services, direct selling and difference between direct selling and employment.
- Getting Started: daily time, laptop, experience, beginner eligibility, training, remote participation and requirements.

- Money & Earnings: payment method, compensation structure, guarantees, joining cost, recurring charges, income factors and payment timing.
- Company & Trust: registration, documents, verification, official information and contact.
- Support & Training: personal guidance, live sessions, team leader contact and post-registration support.
- Support expand/collapse, smooth animation, one expanded item per group by default, FAQ search, deep links and keyboard navigation.
- All questions and answers are managed in admin. Answers must reflect actual company policies.

4.13 Contact / WhatsApp

- Create a strong final conversion section titled “Let’s Talk on WhatsApp”.
- Supporting copy invites visitors to ask about the company, opportunity or joining process.
- Display team leader’s WhatsApp number, icon, large CTA, optional email, social links and contact hours.
- Button: “Message [Leader Name] on WhatsApp”. Open a conversation with a configurable number and prefilled message.
- Example: “Hello! I visited your website and would like to understand more about the company and business opportunity. Please share the details.”

4.14 Footer

- Include logo, brand/team name, short description, quick navigation, contact information, WhatsApp, social links, Privacy Policy, Terms & Conditions, Earnings Disclaimer and Business Disclosure.
- Suggested disclosure: “Information on this website is provided for general informational purposes. Individual experiences and earning examples do not guarantee similar outcomes. Participation, eligibility, costs and compensation are subject to applicable official company policies and terms.”
- Clearly identify the owner as an independent team leader or representative, where applicable.

5. Additional Premium Sections

5.1 Why learn with our team?

- Describe actual learning and support: beginner guidance, learning resources, live training, peer support, practical implementation and progress tracking. All cards editable and based on services actually provided.

5.2 Business journey timeline

- Display when the leader started, initial learning experience, milestones, training activities, team development and current activities. Use vertical timeline on mobile and horizontal/alternating timeline on desktop.

5.3 Team leader message

- Provide a personal video or written message, profile image, play button and WhatsApp CTA.

5.4 Upcoming training & events

- Display event title, date/time, description, meeting type and registration/enquiry link. Automatically hide expired events unless the owner chooses to show them in past events.

5.5 Transparency & important information

- Explain what the opportunity is and is not, fees or purchases, participant activities, compensation calculation, risks and limitations, and where official terms can be reviewed.

5.6 Final call to action

- Closing banner: “Your First Step Is Understanding the Opportunity.” Supporting copy: “Ask questions, explore the facts and make an informed decision.” CTA: “Talk to Me on WhatsApp”.

6. Admin Dashboard — Critical Requirement

The website must include a complete, secure, easy-to-use admin dashboard. The owner must be able to manage the entire website without modifying React components, HTML, CSS, source code or database records manually.

6.1 Admin authentication

- Dedicated route: /admin/login.
- Secure login, password hashing, session management, logout and password reset workflow.
- Rate limiting, CSRF protection where applicable and secure admin-only routes.
- No public admin registration.

6.2 Dashboard overview

- Real database counts for published testimonials, earning proofs, company documents, training media, FAQs and enquiries.
- Recent enquiry activity, pending content approvals and quick content-management shortcuts.
- Do not use hardcoded statistics.

6.3 Admin navigation

Module	Function
Dashboard	Overview and quick actions
Website Settings	Brand and global settings
Hero Section	Manage introduction
About Me	Manage personal profile
Company Profile	Manage company details
Opportunity	Manage business information
How It Works	Manage process steps
Team Members	Manage member profiles
Testimonials	Manage text and video feedback
Earning Proofs	Manage earning evidence
Company Documents	Manage verification documents
Training Gallery	Manage images and videos
How to Join	Manage joining steps
FAQs	Manage questions and answers
Events	Manage training schedules
Contact	Manage contact details
Enquiries	View and manage leads
Pages	Manage supporting pages
SEO Settings	Manage metadata and indexing
Media Library	Manage uploaded assets
Users & Security	Manage admin accounts
Backup & Export	Export important data

6.4 Dynamic content management

- Every homepage section has enable/disable, edit, add, delete, reorder, draft/published and preview controls.
- Use confirmation dialogs for destructive actions.
- Persist all changes through the backend.

6.5 Media library

- Supported images: JPG, JPEG, PNG and WebP. Videos: MP4 and supported external video URLs. Documents: PDF.
- Drag-and-drop upload, preview, file-size/type validation, rename, delete, search/filter, alt text and media usage tracking.
- Optimize images to WebP/AVIF when appropriate.
- Do not compress legal or financial originals in a way that makes them unreadable or changes authenticity.

6.6 Website settings

- Brand: website name, logo, favicon, description and colors.
- Personal: leader name, designation, profile image, biography and contact information.
- Company: official company name, logo, website, registration details, address and official links.
- Contact: WhatsApp number/message, email and social links.
- SEO: default title, description, Open Graph image, canonical URL and robots preferences.
- All settings must be stored in the database.

7. Lead Generation & Enquiry Management

7.1 WhatsApp lead generation

WhatsApp is the primary conversion channel. Important sections should have contextual CTAs. Use different prefilled messages for general enquiry, company information, business opportunity, joining process, training details and testimonials. Generate WhatsApp URLs dynamically using the admin-configured phone number and message, and validate the phone number.

7.2 Enquiry form

- Fields: full name, mobile number, city, optional email, area of interest, preferred contact method, message and consent checkbox.
- Button: “Submit Enquiry”.
- Validate and sanitize input server-side, save to database, generate unique enquiry ID, display confirmation and show the record in admin.
- Lead statuses: New, Contacted, Follow-up Required, Interested, Not Interested, Converted and Closed.
- Admin can add internal notes, update status and export CSV.

7.3 Privacy and consent

Explain why information is collected. Do not collect unnecessary personal information. Obtain appropriate consent for follow-up communications and optional marketing messages. Implement retention and deletion processes according to applicable privacy requirements. Never expose visitor enquiry records publicly.

8. Technical Architecture

8.1 Recommended technology stack

Layer	Recommended technology
Frontend	React.js, Vite, TypeScript, Tailwind CSS
Animation/UI	Framer Motion, Lucide React icons
Routing/data	React Router; TanStack Query or equivalent
Backend	PHP 8.3+ and Laravel
Database	MySQL / MariaDB
Storage	Local storage during development; secure server-side storage in production; optional object storage
Development	Local-first development with separate development and production environment configurations

8.2 Architecture overview

Public visitor flow:

```
VISITOR → REACT + VITE WEBSITE → PUBLIC API → LARAVEL BACKEND → MYSQL DATABASE / MEDIA STORAGE / CONTENT MANAGEMENT / ENQUIRY MANAGEMENT / SEO & SITE SETTINGS
```

Admin flow:

```
ADMIN → /admin/login → ADMIN DASHBOARD → SECURE ADMIN API → DATABASE + MEDIA STORAGE
```

8.3 Suggested database tables

1. users
2. roles
3. permissions
4. site_settings
5. pages
6. sections
7. leader_profiles
8. company_profiles
9. company_documents
10. business_opportunities
11. process_steps
12. team_members
13. testimonials
14. earning_proofs
15. training_media
16. events
17. faqs
18. faq_categories
19. enquiries
20. enquiry_notes

21. media
22. social_links
23. seo_metadata
24. consent_records
25. audit_logs

Use normalized relational tables, timestamps, indexes, foreign keys, unique constraints and soft deletes where appropriate. Use JSON fields only where flexible structured content is genuinely beneficial. Do not store the entire website as one unstructured JSON blob.

9. Functional Requirements

9.1 Public website

- Fully responsive website and dynamic content loading.
- Working navigation, video player, image gallery, earning carousel and FAQ accordion.
- Document preview, WhatsApp integration and enquiry form.
- SEO-friendly URLs, custom 404 page and social-sharing previews.

9.2 Admin website

- Secure authentication, dynamic CRUD operations and content publishing workflow.
- Media management, content ordering, enquiry management and SEO editing.
- Settings management, data export and backup capability.
- Audit logging and role-based access.

System rule: Never hardcode editable business information in public React components. The frontend must consume database-backed APIs. If an API fails, show a graceful error or clearly designed fallback. Never silently display fake company information or fabricated earning records.

10. Security Requirements

1. Password hashing using modern secure algorithms.
2. Role-based access control.
3. Server-side input validation.
4. SQL injection protection through parameterized queries/ORM.
5. XSS protection.
6. CSRF protection for cookie-based authenticated operations.
7. Rate limiting.
8. Secure file upload validation and file-size limits.
9. Private storage for sensitive documents.
10. Secure session cookies.
11. HTTPS in production.
12. Admin audit logs.
13. Database backups.

14. Protection against unauthorized media access.

15. Login attempt monitoring.

16. No credentials or secrets inside frontend source code.

Never trust client-side validation alone.

11. SEO & Performance

11.1 SEO requirements

- Unique title and meta description for every page.
- Open Graph and social-sharing metadata.
- Canonical URLs, XML sitemap and robots.txt.
- Structured data only where accurate and appropriate.
- Image alt attributes and semantic HTML.
- Clean URL structure, internal linking and breadcrumbs on relevant supporting pages.

Suggested URL structure:

```
/ · /about · /company · /opportunity · /how-it-works · /team · /team-results · /company-proof · /training · /how-to-join · /faqs · /contact · /privacy-policy · /terms · /earnings-disclaimer
```

11.2 Performance requirements

- Mobile-first optimization and Core Web Vitals improvements.
- Lazy-load below-the-fold images and videos.
- Use responsive image sizes and avoid unnecessary JavaScript.
- Minimize layout shifts, optimize fonts and paginate/progressively load large galleries.
- Cache public content appropriately.
- Target Lighthouse scores of 90+ for Performance, Accessibility, Best Practices and SEO where realistically achievable without sacrificing functionality.

12. Animation & Micro-interactions

- Smooth page entrance and scroll-triggered section reveals.
- Subtle card hover elevation and button hover feedback.
- Soft image zoom and animated FAQ expansion.
- Smooth carousel transitions and floating WhatsApp CTA.
- Sticky navigation transitions.
- Count-up animations only for verified statistics.
- Respect reduced-motion preferences.
- Avoid excessive parallax, continuous animations and unnecessary loading effects.

13. Legal, Trust & Content Compliance

The project is intended for use in India. The implementation must account for applicable requirements, including the Consumer Protection (Direct Selling) Rules, 2021 and the 2023 amendment, where relevant. Refer to the Department of Consumer Affairs: Consumer Protection Acts and Rules.

13.1 Mandatory content safeguards

- No guaranteed income claims.
- No fabricated earning screenshots or misleading testimonials.
- No fake company verification badges or false employment claims.
- No fabricated registration details.
- No hidden joining fees or costs.
- No misleading claims about required time or skills.
- Do not represent recruitment alone as a source of guaranteed income.
- Clearly explain actual products/services and compensation model.
- Show relevant costs, conditions and official policies accurately.
- Where the owner is an individual team leader, clearly disclose that status.

Company registration and Udyam registration must not be represented as blanket government endorsement of a particular business opportunity.

13.2 Personal data protection

Design privacy and consent workflows with reference to the Digital Personal Data Protection Act, 2023 and applicable rules and commencement requirements. Refer to India Code — DPDP Act. Provide appropriate privacy notices, consent records, contact information and data-handling processes.

> **Have final company-specific claims, policies and legal disclosures reviewed by a qualified Indian legal professional before launch.**

14. Development Phases

Phase 1 — Project foundation

- Initialize React + Vite + TypeScript; configure Tailwind and routing; create Laravel backend; configure MySQL; establish API structure and environment variables; create database migrations; build reusable components and design tokens.

Phase 2 — Public website

- Implement header, hero, About Me, Company Profile, Business Opportunity, How It Works, Team Testimonials, Earning Proofs, Company Proof, Training Gallery, How to Join, FAQs, Contact and Footer.

Phase 3 — Admin dashboard

- Implement authentication, dashboard overview, settings, content modules, media library, document manager, testimonials, earning-proof management, FAQs, events, enquiries, SEO and user permissions.

Phase 4 — Integration

- Connect public frontend and admin with APIs; integrate WhatsApp; implement enquiry submissions, media uploads, document previews and dynamic content publishing.

Phase 5 — Quality assurance

- Run responsive, functional, security, API, form, content, media-upload, SEO, performance and accessibility testing.

Phase 6 — Production readiness

- Configure production environment, domain, SSL, database backup, storage permissions, error logging and privacy-conscious analytics. Complete final deployment checks.

Do not deploy automatically during development. Complete local implementation and testing first.

15. Acceptance Criteria

15.1 Public website

- All reference-inspired sections are implemented.
- Additional recommended sections are implemented.
- Website works on mobile, tablet and desktop.
- All navigation links and WhatsApp CTAs work.
- Enquiry form saves data successfully.
- Testimonials display actual uploaded content.
- Earning carousel works.
- Company documents open correctly.
- FAQs work.
- No fabricated business information is displayed.
- Empty content sections are hidden or handled gracefully.

15.2 Admin dashboard

- Admin login works securely.
- Every homepage section is editable.
- All content can be published/unpublished.
- Images and videos can be uploaded.
- Documents can be uploaded and managed.
- Earning proofs require approval before publication.
- FAQs can be managed.
- WhatsApp number, company information and personal information can be changed.
- Enquiries can be viewed and managed.
- SEO settings work.
- Changes appear on the public website without source-code modification.
- Admin data is protected from public access.

15.3 Quality

- No broken links or broken images.
- No console errors.
- No exposed credentials.
- No fake sample information in production.
- No unauthorized access to admin features.

- No unapproved financial or personal documents displayed.
- Database backup and restore procedure tested.

16. Future Enhancements

1. Hindi and multilingual website support.
2. Multiple team leader profiles.
3. Individual member profile pages.
4. Member-submitted testimonials with approval.
5. Private team member portal.
6. Training resource library.
7. Event registration.
8. Automated WhatsApp integrations through approved APIs.
9. Lead source tracking.
10. Analytics dashboard.
11. Blog and educational resources.
12. Advanced CRM integration.
13. Custom domain support for additional leaders.

These features should not delay the first production-ready release.

17. Final Implementation Instructions for Antigravity

Act as a senior full-stack software architect, premium UI/UX designer, database architect, security engineer and QA engineer. Implement the entire product as a working website—not just a visual prototype.

1. **Study the references first.** Use the uploaded screenshots as visual and structural references. Understand content hierarchy, card layouts, image treatment, carousels, FAQ presentation, company proof presentation and conversion flow.
2. **Build the entire application.** Do not stop after creating the homepage. Implement backend, database, API, admin dashboard, content management, media management and all required public pages.
3. **Prioritize visual quality.** The result must look like a premium, professionally designed startup product. Avoid generic dashboard templates, default Bootstrap appearance, boring cards and repetitive section layouts.
4. **Use reusable components.** Build a maintainable component architecture with reusable buttons, cards, section headings, galleries, accordions, navigation, dialogs, forms and content modules.
5. **Keep content dynamic.** Every business-specific detail must come from the database and be editable from the admin dashboard.
6. **Do not invent company details.** The owner will personally enter company name, registration documents, company information, leader details, team details, earning proofs, testimonials, contact details and all other business-specific information. Until then, use clearly marked development placeholders only. Never publish fabricated proof, financial results or verification claims.
7. **Make the admin dashboard genuinely functional.** Every add, edit, delete, upload, reorder, publish, unpublish and save action must persist through the backend. Do not build decorative buttons that do nothing.
8. **Follow a development-first workflow.** Inspect the environment and existing project files first. Create and test locally, implement migrations and seed only safe development data. Do not overwrite existing files without understanding their purpose.

9. **Perform actual QA.** Run the application, inspect pages, test interactions, validate API responses, test database operations and fix errors. Do not mark a feature complete merely because its UI exists.
10. **Work in milestones.** If the whole application cannot be implemented in one execution, divide work into milestones and continue until every requirement is implemented. Do not silently omit features.
11. **Provide a final delivery report.** At completion, provide implemented feature list, project directory structure, technology stack, database structure, admin setup instructions, local development instructions, required environment variables, testing results, limitations and production deployment instructions.

FINAL PRODUCT EXPECTATION

The finished product should feel like a premium personal business website that inspires confidence through transparency, authentic people, genuine documentation, clear explanations and a frictionless WhatsApp communication experience. It should be visually impressive, technically maintainable, secure, responsive, SEO-friendly and completely manageable through its admin dashboard.

Build it as a real production-ready application, not a static design mockup.

END OF PRODUCT REQUIREMENTS DOCUMENT
